AI ENGINEER- (Job code: AIE-2600)

The AI Engineer is responsible to Manage and direct processes and R&D to meet the needs of our AI strategy. Part of her/his daily activities is to understand client challenges and how integrating AI capabilities can help lead to solutions as well as analyze and explain AI and machine learning (ML) solutions while setting and maintaining high ethical standards.

Responsibilities:

- Advise C-suite executives and business leaders on a broad range of technology, strategy, and policy issues associated with AI
- Work on functional design, process design (including scenario design, and flow mapping), prototyping, testing, training, and defining support procedures, in collaboration with an advanced engineering team and executive leadership
- Articulate and document the solutions architecture and lessons learned for each exploration and accelerated incubation
- Serve as liaison between stakeholders and project teams, delivering feedback and enabling team members to make necessary changes in product performance or presentation

Requirements:

- Bachelor’s or master's degree in computer science or a related field
- Two or more years of experience in applying AI to practical and comprehensive technology solutions

- Experience with ML, deep learning, TensorFlow, Python
- Experience in program leadership, governance, and change enablement
- Knowledge of basic algorithms, object-oriented and functional design principles, and best-practice patterns
- Experience in REST API development, NoSQL database design, and RDBMS design and optimizations

Additional Requirements:

- Experience with innovation accelerators
- Experience with cloud environment

What we offer:

- Competitive remuneration package
- Private Health Insurance
- High standard working environment
- Cooperation with International Companies & Executives
- Ongoing training
- Opportunities for career development
